General Education, Computer Science credits. Transfer Fall 2014

California State University, Bakersfield (Fall 2014 - Spring 2016)
Bachelors of Computer Science, Spring 2016

Skills

AngularJS, Ionic, Java Spring, Maven, git, Oracle, Postgresql, Liquibase, Bower and npm, Linux, vim

Projects

Sequoia Grove (Summer 2015 - present, CSUB and personal)
Angular and Java Spring web application for employee scheduling.
An upgrade for businesses using paper, pen and electronic spreadsheets for scheduling. Employees login to view work schedules and request vacation. Managers also write schedules and maintain employee and store information. The app checks to make sure each employee is able to work where they are placed.
Responsibilities: Project design, management and setup. Full stack development responsibilities.

Central Coast Wine (June 2016 - July 2016, Mershon Enterprises)
Ionic, Angular and Firebase web application for wineries of California's central coast.
A user can view a list of wineries, see details about each one, conveniently contact them and view them on a map. Wineries are sorted by which are featured, which have offers, or all. A user maintains any trails they create. Trails contain a list of wineries to visit. The user may also view any trails created by other users.
Responsibilities: Use designer's provided sketches and an existing prototype with some existing functionality to build app. Full stack development responsibilities.

What's Happening? (April 8 - 10 2016, "Distill Your Idea" Hackathon, First Place)
Angular social events web application that utilizes Facebook's graph API to pull event data from local bars and breweries. Displays the data as a convenient list.
Planned but not implemented: Users request event types for specific places, and post their choices to Facebook. Data is collected finding trends in the community. Businesses sign up for data collection plan to target local consumers.
Responsibilities: Team lead, development of project idea, technical design and implementation.

Cenotaph Memorial (April 2015 - April 2016, Mershon Enterprises)
Ionic, Angular and Clojure web application for virtual memorials.
Users create and view virtual memorials. They may donate to charities in honor of memorials.
Responsibilities: Produce UI/UX design requirements by specifying views and their functionality. Then use wireframes to construct application views. Primarily front end responsibilities, some back end responsibilities.

Hydra (March 2015 - May 2015, Slixbits and Mershon Enterprises)
EmberJS and Clojure web application for Data Collection.
Responsibilities: Assorted Front End Development.
